

STOP!

CITY OF TOPPENISH

Fats, oils and grease blockages cause sewer backups, spills and overflows that cost residents money. The City is working to manage their Fats, Oils & Grease (FOG) to help reduce the amount of these harmful food byproducts from entering the wastewater sewer. The City will be continuing regular inspections and will be working with businesses that are out of compliance to help them remove "FOG" from their drains and the sewer system.

Do not put Fats, Oils and Grease down the drain!
