CITY OF TOPPENISH PUBLIC WORKS WATER DEPARTMENT

Consumer Confidence Report 2022

The City of Toppenish is proud to present our annual Consumer Confidence Report, which keeps our residents informed of their water quality. This report includes the most recent water sampling test results. Over the years, we have dedicated ourselves to producing drinking water that meets all state and federal standards. The City of Toppenish has three Washington State Certified Operators with a combined 45 years of water treatment and distribution experience. As new challenges to drinking water safety emerge, we remain vigilant in meeting the goals of source water protection, water conservation, and community education while continuing to serve the needs of all our water users.

Our Drinking Water Source

Toppenish derives its drinking water from six deep Wells: Well #3, Well #5, Well #6, Well #7, Well #8 and Well #9. These Wells pump groundwater to four storage reservoirs (two elevated water storage reservoirs and two standpipe reservoirs). These reservoirs help to protect the City's estimated 9,000 residents, businesses and visitors during fire, power outages, and high water-use periods. Water is carried from the Wells, disinfected with chlorine and fluoride addition. Residual chlorine and fluoride levels in the distribution system are checked daily to ensure that the amounts of chlorine and fluoride utilized are effective while remaining at the safe levels determined by the EPA. Finally, the water travels from the reservoirs to you through approximately 37 miles of water distribution piping.

Water Use Efficiency Update

The City of Toppenish has a responsibility to educate the public on conservation and to be able to account for at least 90% of the water, it produces. In 2022, we were able to account for 95 % bringing our three-year average to 90%. In December 2022, we began installing new water meters for greater accuracy.

Effect of Lead in Drinking Water

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The City of Toppenish is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before drinking or cooking.

Water and Money Saving Tips

- If washing dishes by hand don't let the water run continuously.
- > When doing laundry, wash only full loads.
- Limit baths: you can save between 20-50 gallons of water per day. Showering with a low-flow or restricted shower head can help you save water and money.
- > Check for leaky outdoor faucets, pipes, and hoses. Repair or replace if needed.
- > Put a timer put on your irrigation system set so it doesn't over water your yard. Grass has deep roots and needs only about one inch of water per week.

Contaminants Range Low-Hig Contaminants Low-Hig Contaminants Low-Results Contaminants Contamina		Violation	Typical Source
, , , , , ,	lt Date	Violation	Source
Inorgania Contaminanta			
Inorganic Contaminants			
<i>Arsenic (ppb)</i> 0 10 0.2-0.9	Aug 2019	No	Found in natural aquifer deposits
Nitrate (ppm) 10 10 < 0.0700 2.93	0 - Sept 2022	No	Runoff from fertilizer use; septic tanks, sewage, erosion of natural deposits
Manganese (ppm) n/a 0.05 0.0278 0.1010	- June 2022	No	Naturally occurring in surface water, ground water, and soils that may erode into these waters
Iron (ppm) n/a 0.3 0.0500 0.0154	- Oct 2022	No	Corrosion of household plumbing systems
Disinfection By- Products			
HAA5 (Halo acetic 0 60 ND Acids) (ppb)	July 2022	No	By-product of drinking water disinfection
TTHM (Total 0 80 ND Trihalomethanes) (ppb)	July 2022	No	By-product of drinking water disinfection
Lead & Copper MCLG AL 90 th Distribution Percenti	le		
Lead (ppb) 20 0 15 0.66 Samples	Dec 2021	No	Corrosion of household plumbing systems; erosion of natural deposits
Copper (ppm) 20 1.3 1.3 0.178 Samples	Dec 2021	No	Corrosion of household plumbing systems; erosion of natural deposits

Terms & Abbreviations

AL-Action Level is the concentration of a contaminant which if exceeded, triggers treatment/other requirements that a water system must follow.

MCL-Maximum Contaminant Level-Highest level of a contaminant allowed in drinking water. These are set as close to the MCLG's as feasible using best available treatment technology.

MCLG-Maximum Contaminant Level Goal-Level of a contaminant in drinking water below which there is no known or expected risk to health.

ND-Not Detected-Lab analysis indicates that the contaminant is not present or not detectable with best available technology.

Ppb: Parts per billion

Ppm: Parts per million

Range: Lowest amount a contaminant detected highest amount detected for a sample

90th **Percentile**: out of 30 homes sampled, 27 were at or below this level. One site exceeded state trigger level of 0.6 ppb. Trigger level is set as a caution and does not indicate a health hazard. It may indicate additional sampling is required.

Fluoride

The City of Toppenish fluoridates its water system in accordance with standards set the by the Centers for Disease Control and Prevention (CDC). At the recommended levels, fluoride can help prevent tooth decay and keep tooth enamel strong in children and adults.

Questions Regarding Your Drinking Water?
